Resichem Primers

Resichem manufactures a range of primers to meet the needs of individual applications. The products range from damp proof membranes to fast curing solvent free penetrating primers for concrete.

All of the products are compatible with Resichem 501 CRSG, 502 CRXF, 507 DWPU and 511 UCEN.

Resichem 504 DPSF

An epoxy resin based solvent free high build damp proof membrane specifically developed to suppress residual construction moisture and rising dampness in concrete and sand/cement screeds. The product can be used as a stand alone primer or as a primer prior to the application of other Resichem products

Typical Applications

Cementitious surfaces that are susceptible to damp

Resichem 505 Damp Seal

An epoxy resin based solvent free thin film primer specifically developed to be used on green and damp surfaces. On curing the product consolidates the substrate and helps to improve adhesion during application of other coating systems.

Typical applications

Ideal for coating concrete floors, problematic cementitious surfaces

Resichem 509 EPXF

A fast curing solvent free clear epoxy coating designed for the long-term protection of porous concrete structures and as a primer for other Resichem coatings on dry but highly porous concrete

Typical Applications

Concrete floors and chemical containment areas

Priming of concrete bund areas

Priming of storage tanks

Sealing porous concrete surfaces

Priming of chemical protective flooring
